

An initiative under CERC-ATGL Greenmosphere Students' Club

Dear Students

The month March marks the changing of seasons, bringing new possibilities and a reminder to be mindful of our surroundings. As the days grow longer, it's the perfect time to step back from digital distractions, reconnect with nature by conserving energy and protecting the environment.

Take a moment to enjoy the outdoors, whether it's a walk in the park or simply watching the sunset. While watching TV, turn off extra lights to save power. Charge your devices only when needed, don't keep them plugged in overnight. Use notebooks wisely and write on both sides to reduce paper waste.

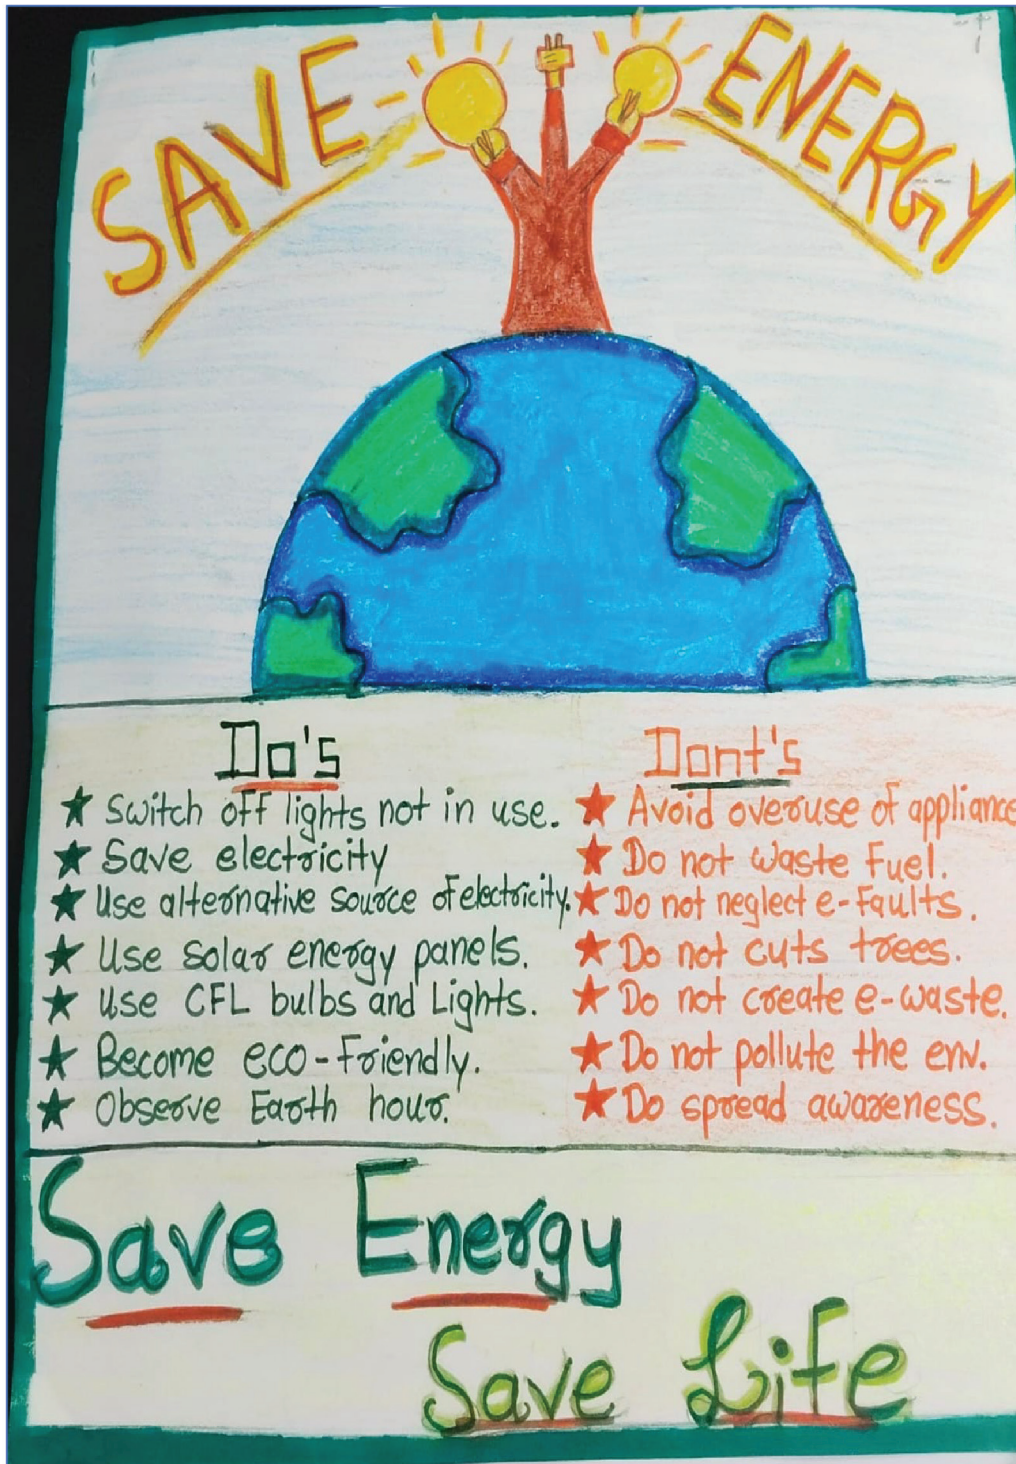

Every mindful action adds up to a greener future. Let's make conscious choices and be responsible for our planet.

'Green Millennials' is an online magazine published every month, which is available to you directly in your mailbox or your WhatsApp. We invite you all to send your creative contributions along with your full name, school name and photographs to greenmillennials@cercindia.org.

Happy reading!

Story on 'The Mystery of Lights'

Rohan, a curious student noticed something strange in his town. The streetlights were always on, day and night!

He asked his friends Aisha & Kunal to help him solve the mystery. Together, they searched for clues and talked to the town council.

They discovered that the old timers that controlled the lights were faulty. The council replaced the timers, and the lights ~~starting~~ started turning off during the day.

Everyone Pitched In

The townspeople were inspired to save energy. They turned off lights, fans and TVs when not in use.

Rohan and his friends created posters and flyers to spread the word. Soon, everyone was working together to reduce energy waste.

The Result

The town's electricity bills went down.

The air became cleaner, and the town became a greener place.

Rohan and his friends were heroes! They proved that even small actions can make a big difference.

What We Can Learn

Turning off lights and electronics when not in use saves energy.

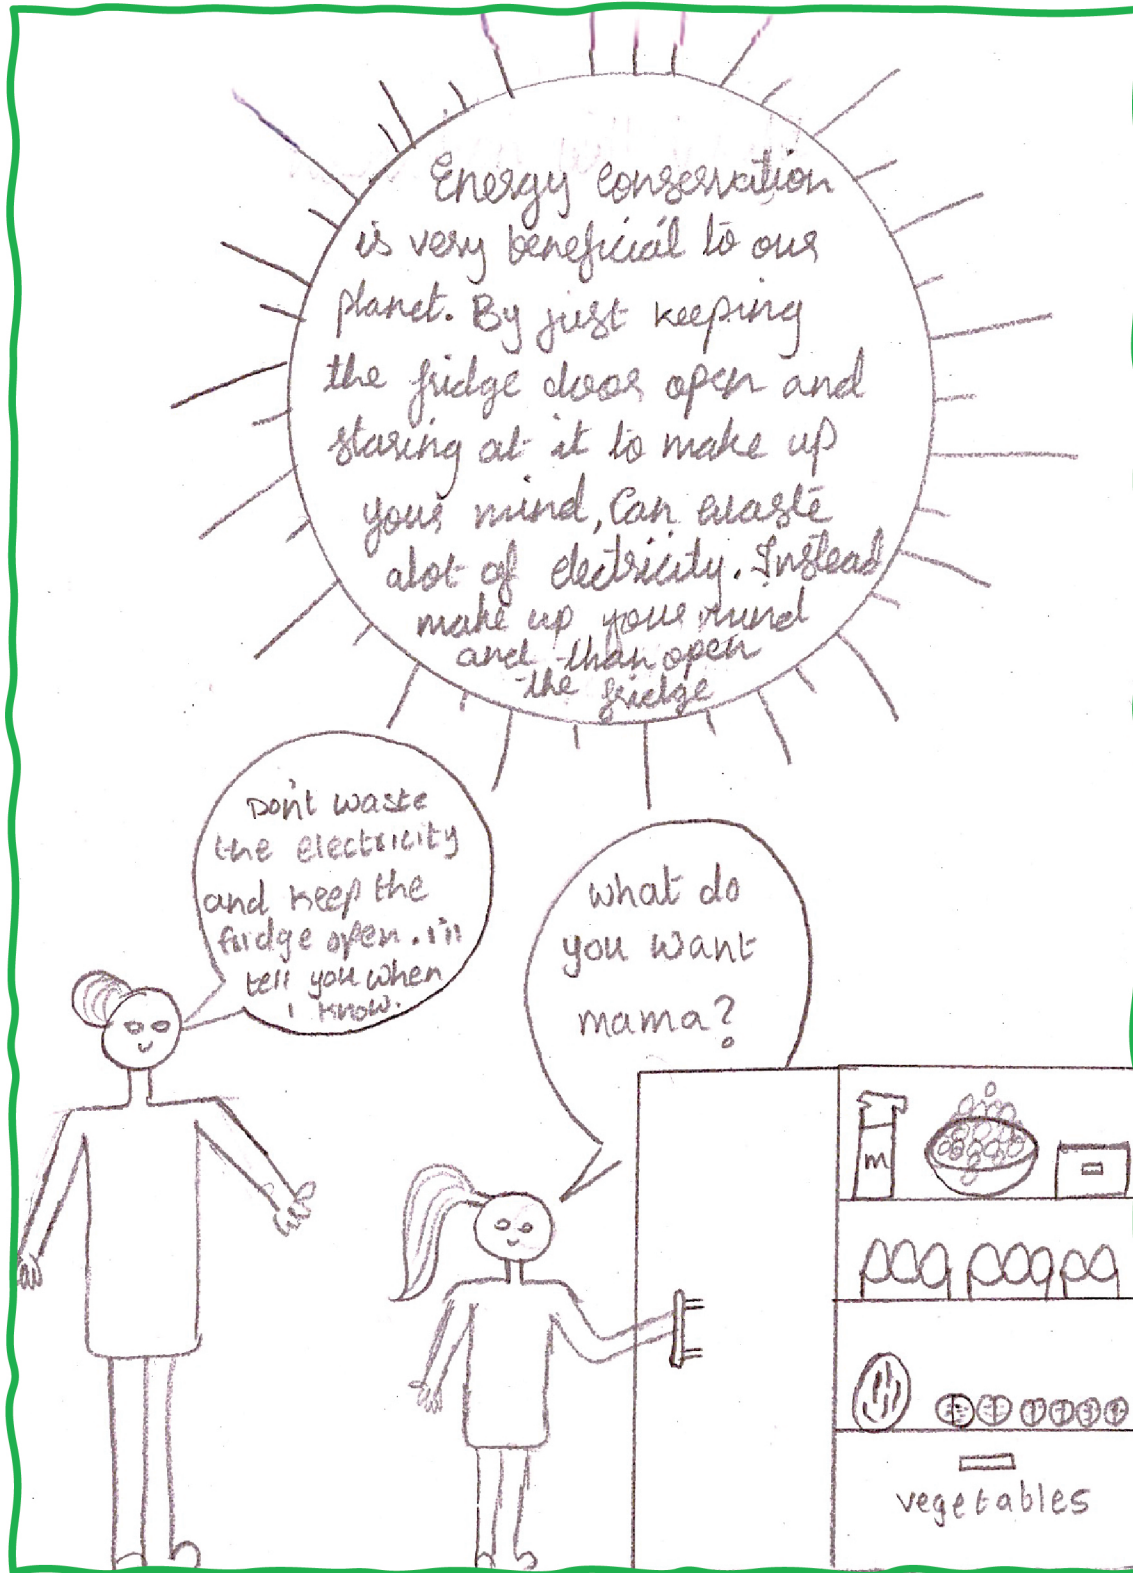

Working together, we can create a cleaner, greener world.

Small actions can lead to big changes!

Save Energy.

1. Use energy efficient light bulbs.
2. Use smart power strips.
3. Use natural light.
4. Reduce water heating expenses.
5. Clean or replace air filters.
6. Cook using the right sized burner.
7. Air dry dishes and clothes.
8. Turn your refrigerator down.
9. Use energy efficient appliances.
10. Use solar energy.

Green Millennials is a monthly e-newsletter, published as part of the CERC – ATGL Greenmosphere Students' Clubs project. These clubs are an initiative of Adani Total Gas Ltd (ATGL) and Consumer Education and Research Centre (CERC) for school students. They aim to sensitize young students about energy conservation and through participative activities, convert them into 'Conservation Ambassadors' of the future. The newsletter will carry contributions by member students in the form of essays, write-ups, poems, artwork, drawings etc. on various energy conservation themes.
