An initiative under CERC-ATGL Greenmosphere Students' Club

Dear Students

Congratulations for joining us in this initiative towards greater awareness and towards seeking simple solutions to help minimise effects of climate change and make the world a better place. Conserving Energy and also harnessing the almost limitless resource that Nature offers us, in the form of various renewable energy sources has become a global way-forward. We, at Adani Total Gas Ltd (ATGL), along with our project partners, Consumer Education and Research Centre (CERC) have identified the infinite potential of youth ideas as a constructive force towards this goal. To harness these immense resources for positive environment action, you are now a valued member of CERC - ATGL Greenmosphere Students' Club – a project for students.

The Club activity involves fun-learning & creative projects including interactive sessions, training on how to do home energy audits, topical story-telling and much more.

As a part of the project activities, we are also launching for you “Green Millennials”, a monthly e-Magazine. This will be your own Magazine, created for you, and by you. We are happy to bring to you the first Issue of ‘Green Millennials’, which expresses your own understanding, your concerns, possible solutions and actions for homes, communities, etc., all of it your own creation, in your own styles, through articles, stories, poems, posters, drawings, etc.

‘Green Millennials’ will be an online magazine published every month. It will be available to you directly in your mailbox or your WhatsApp. We invite you all to participate by sending in your creative contributions to greenmillennials@cercindia.org along with your full name, school name and photographs, for selected works to be published. The most meritorious among you also has the chance of being co-opted on the Editorial Team.

Happy Green-Clubbing and Happy Reading

OUR DREAM WORLD

BY SIDDHANT RAJ

Siddhant Raj
Class - 7
Riverside School

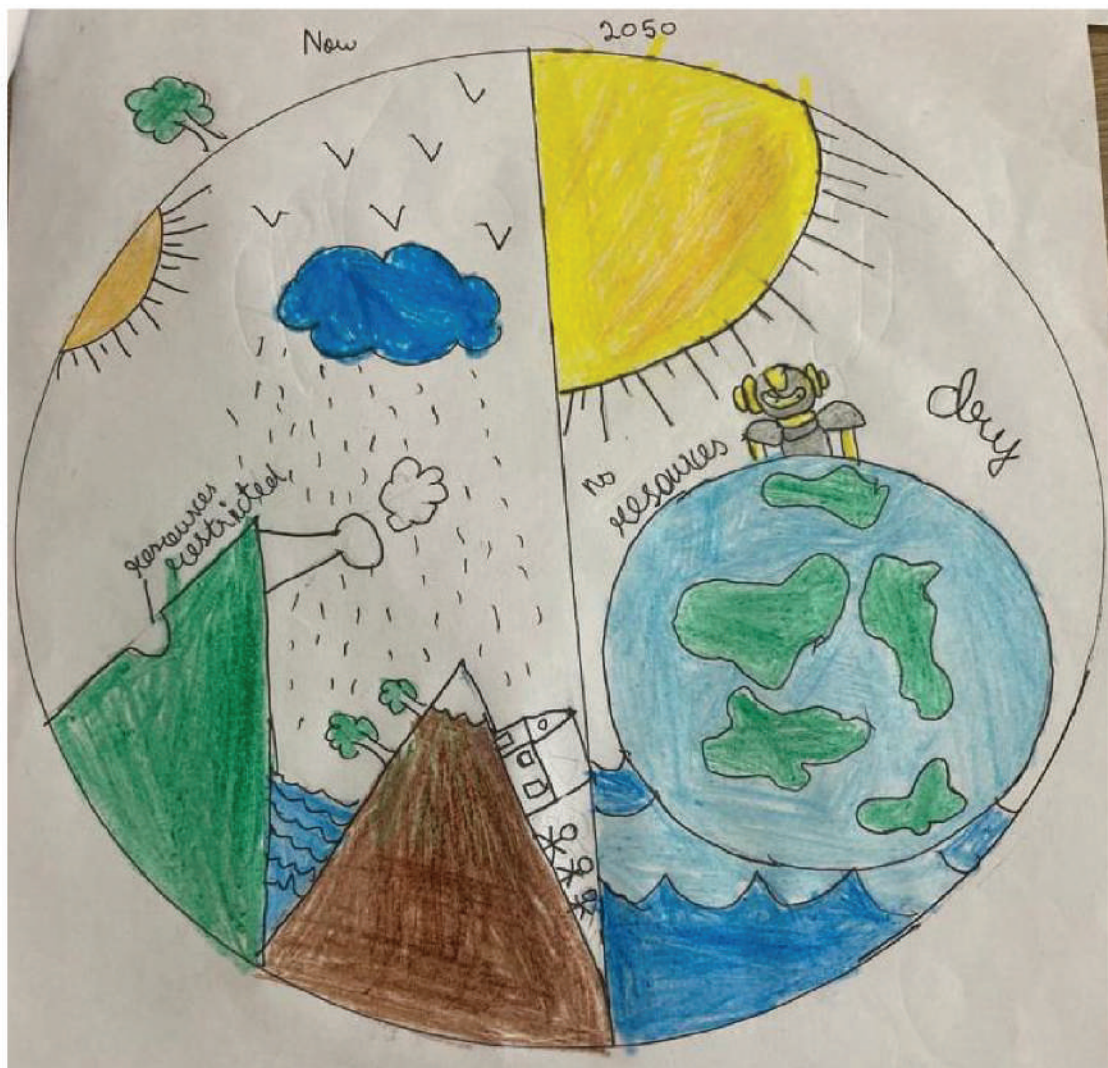

I don't want to see people coughing and rasping
And wheezing and hacking,
I want to see jolly faces,
I want to see radiant smiles,
I want to see a green environment with fresh and
purified air,
And for that to happen, we must conserve energy,

we want a better environment and a better world,
We must conserve energy,
If we want harmony to thrive,
We must conserve energy
we want to reduce toxic pollutants pervading the
air,
We must conserve energy,

Our need for change is sore,
I hope the advocates of energy conservation rise
more and more

Star rating of my home appliances.

- T.V. - ★ ★ ★ ★ ★
- A.C. - ★ ★ ★ ★ ★
- Washing Machine - ★ ★ ★ ★ ★
- Refrigerator - ★ ★ ★ ★ ★

In this generation every house have many appliances like A.C., T.V., Refrigerator, washing machine, and LED lights. But do you know that how many appliances did our parents and Grandparents had?

- My parents had an old type T.V, a small refrigerator, a window A.C and a washing machine.
- My Grandparents had a radio T.V only. They didn't have any other appliances in their house.

I would like to compare my appliances from my parents and Grandparents. I have five A.C, four T.V, one refrigerator and two washing machine. I would like to want the future 2050 to be green and clean. Decrease of pollution. Usage of cycles or CNG vehicles. More usage of Solar panels at home. I just hope that our future 2050 be like.

With the students of Som Lalit School

With the students of Adani Vidya Mandir

With the students of Vijaynagar English School

With the students of KR Raval High School

With the students of HB Kapadia School Premnath

Green Millennials is a monthly e-newsletter, published as part of the CERC – ATGL Greenmosphere Students' Clubs project. These clubs are an initiative of Adani Total Gas Ltd (ATGL) and Consumer Education and Research Centre (CERC) for school students. They aim to sensitize young students about energy conservation and through participative activities, convert them into 'Conservation Ambassadors' of the future. The newsletter will carry contributions by member students in the form of essays, write-ups, poems, artwork, drawings etc. on various energy conservation themes.
